Robotic Welding Engineer
Columbus, OH
$75,000-$95,000
25442

As part of one the world’s largest automotive suppliers, this state-of-the-art facility has the corporate backing, name recognition, and industry expertise to outpace its competition. With a nearly 70-year history of innovation and over 100 global locations, this manufacturing juggernaut has capabilities matched by none other. Improvements in several of their product offerings and a global rise in demand have led to unprecedented success. To maintain this pace, they are actively searching for a Manufacturing Engineer with high-volume manufacturing experience.

Why you should apply:
- Direct Access to business unit leaders and company executives
- Autonomous work environment
- State-of-the-art production facility
- Global advancement opportunities

Duties of the Welding Engineer include:
- Develop and lead manufacturing processes leading to cost effective production, methods, operating standards, and process flow within the welding and final assembly departments of this high-volume automotive facility
- Improve or develop new welding equipment, methods, and procedures
- Create standard operating procedures to guide production personal in welding processes and inspection
- Maintain documentation for PFMEAs, Change-over procedures, APQP, and PPAP
- Coordinate the launch of new programs, new equipment installs, and retrofits
- Measure variance to efficiency standards, investigate out of control metrics, and suggest corrective actions
- Utilize knowledge of APQP to participate in product and process introduction

Requirements of the Welding Engineer include:
- A Bachelor’s degree in Welding Engineering or similar field
- Previous experience as Welding, Manufacturing, or Process Engineer in a high-volume welding and fabrication environment
- Robot experience
