Entry Level Welding Engineer – Fischer Engineering Company

About this Job

We are seeking an entry level welding engineer interested in destructive and non-destructive testing, and codes and standards. If you like a mix of routine and variety, this position may be a good fit for you. You'll work with an experienced welding engineer, you'll touch a wide variety of industries, and deal with several different welding processes.

Responsibilities including but not limited to:

- Review customer drawings for welding symbols and determine required qualification testing
- Prepare welding procedure specifications (WPS), procedure qualification records (PQR), and welder qualification test records in accordance with various welding codes
- Test and examine welds for conformance with various welding codes
- Answer customers' welding code-related questions
- Determine requirements for unusual material requests from customers and prepare product quotes
- Design, develop, and implement solutions to automate tasks in the shop and office.

Interest in radiography, automation, and/or machining will serve you well in this role, as several internal projects may require knowledge of these fields.

About Fischer Engineering Company, LLC

Fischer Engineering has been providing welding engineering, testing products and services to fabricators, manufacturers and laboratories since 1976. Our products, including weld bend testers, weld tensile testers and welding coupons, are used throughout the United States and by many countries around the world. Fischer is located in Dayton, OH.
